- 1) of his suspicious
- 2) No matter
- 3) a lot of traffic
- 4) due to risk
- 5) wasn't easy so they
- 6) for his aim to buy
- 7) to hit avoidable as
- 8) he is pride to
- 9) such a frightful accident
- 10) for that order to

Writing.

Task 3

Today is a meaningful day for me. I will go to Mars for the 6-month mission period. But, I have to take only five foods with me.

The first thing that coming to mind when you going to space is about meal.

Space has no gravity, so foods should be fast-easy clinging to organism. I will take banana, water, Potato pasta, (dry) dried breads and soup in packed why them? Well, let me explain.

Banana in my opinion is one of the best fruit to take to space and also Mars. It has vitamins and benefits to humans health. Furthermore, this fruit is eatable and small to take with.

Water is (a) must have product. Without it you can't survive even a 2-3 days, even though is out of atmosphere. Whenever you will be, it's a very important thing and liquid form each of us.

Potato pasta is four amateurs. In my case, I would take a potato pasta because of its structure and soft. It is also has many benefits for our health. Even though it's always delicious.

Dried breads are unique product that have ever created. Dried breads has proteins, vitamins and important microthings for human.

Soup in packet is a needable liquid in space, so that you can use it like juice or whatever. It is also up appetite and give some energy to work and explore Mars.

In conclusion, there are many foods that you can take with you to Mars or basically to space and it should be (be) beneficial for people.
